Section I – Independent Service Auditors' Report

To the Management of iAltA Private Markets, LLC:

Scope

We have examined iAltA Private Markets, LLC's ("IPM" or "the Company" or "the Organization") accompanying description of its Verivend system titled "iAltA's Verivend System" throughout the period July 1, 2025 to December 31, 2025 (description) based on the criteria for a description of a service organization's system in DC 200, *2018 Description Criteria for a Description of a Service Organization's System in a SOC 2 Report (With Revised Implementation – 2022)* in AICPA, *Description Criteria*, (description criteria) and the suitability of the design and operating effectiveness of controls stated in the description throughout the period July 1, 2025 to December 31, 2025, to provide reasonable assurance that IPM's service commitments and system requirements were achieved based on trust services criteria relevant to the security principle (applicable trust services criteria) set forth in TSP 100, *2017 Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy (With Revised Points of Focus – 2022)* in AICPA, *Trust Services Criteria*.

IPM uses subservice organizations as described below:

- Amazon Web Services (AWS): Provides cloud infrastructure services, including compute, storage, database, monitoring, and security capabilities. Amazon Web Services hosts the production environment and delivers services such as Amazon Simple Storage Service (Amazon S3), Amazon Relational Database Service (Amazon RDS), Amazon CloudWatch, Amazon Web Services Identity and Access Management (AWS IAM), Amazon EventBridge, Amazon Elastic Container Registry (Amazon ECR), Amazon Simple Notification Service (Amazon SNS), Amazon Inspector, and Amazon GuardDuty.
- Microsoft 365 (Microsoft Corporation): Provides email, calendar, and productivity services for corporate communications and collaboration.
- GitHub (Microsoft Corporation): Provides source code version control, repository management, and change tracking services for application development.

The description indicates that complementary subservice organization controls that are suitably designed and operating effectively are necessary, along with controls at IPM, to achieve IPM's service commitments and system requirements based on the applicable trust services criteria. The description presents IPM's controls, the applicable trust services criteria, and the types of complementary subservice organization controls assumed in the design of IPM's controls. The description does not disclose the actual controls at the subservice organizations. Our examination did not include the services provided by the subservice

organizations, and we have not evaluated the suitability of the design or operating effectiveness of such complementary subservice organization controls.

The description indicates that complementary user entity controls that are suitably designed and operating effectively are necessary, along with controls at IPM, to achieve IPM's service commitments and system requirements based on the applicable trust services criteria. The description presents IPM's controls, the applicable trust services criteria, and the complementary user entity controls assumed in the design of IPM's controls. Our examination did not include such complementary user entity controls, and we have not evaluated the suitability of the design or operating effectiveness of such controls.

The information included in Section V, "Other Information Provided by the Service Organization" is presented by Management of IPM to provide additional information and is not part of IPM's description of its Verivend system made available to user entities during the period July 1, 2025 to December 31, 2025 and accordingly, we express no opinion on it.

Service Organization's Responsibilities

IPM is responsible for its service commitments and system requirements and for designing, implementing and operating effective controls within the system to provide reasonable assurance that IPM's service commitments and system requirements were achieved. IPM has provided the accompanying assertion titled "Assertion of IPM's Management" (Assertion) about the description and the suitability of design and operating effectiveness of controls stated therein. IPM is also responsible for preparing the description and Assertion, including the completeness, accuracy, and method of presentation of the description and assertion; providing the services covered by the description; selecting the applicable trust services criteria and stating the related controls in the description; and identifying the risks that threaten the achievement of the service organization's service commitments and system requirements.

Service Auditor's Responsibilities

Our responsibility is to express an opinion on the description and on the suitability of design and operating effectiveness of controls stated in the description based on our examination. Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants (AICPA). Those standards require that we plan and perform our examination to obtain reasonable assurance about whether, in all material respects, the description is presented in accordance with the description criteria and the controls stated therein were suitably designed and operating effectively to provide reasonable assurance that the service organization's service commitments and system requirements were achieved based on the applicable trust services criteria. We believe that the evidence we obtained is sufficient and appropriate to provide a reasonable basis for our opinion.

An examination of the description of a service organization's system and the suitability of the design and operating effectiveness of controls involves the following:

- Obtaining an understanding of the system and the service organization's service commitments and system requirements.
- Assessing the risks that the description is not presented in accordance with the description criteria and that controls were not suitably designed or did not operate effectively.
- Performing procedures to obtain evidence about whether the description is presented in accordance with the description criteria.
- Performing procedures to obtain evidence about whether controls stated in the description were suitably designed to provide reasonable assurance that the service organization achieved its service commitments and system requirements based on the applicable trust services criteria.
- Testing the operating effectiveness of controls stated in the description to provide reasonable assurance that the service organization achieved its service commitments and system requirements based on the applicable trust services criteria.
- Evaluating the overall presentation of the description.

Our examination also included performing such other procedures as we considered necessary in the circumstances.

We are required to be independent and to meet our other ethical responsibilities in accordance with relevant ethical requirements relating to the engagement.

Inherent Limitations

The description is prepared to meet the common needs of a broad range of report users and may not, therefore, include every aspect of the system that individual users may consider important to meet their informational needs.

There are inherent limitations in the effectiveness of any system of internal control, including the possibility of human error and the circumvention of controls.

Because of their nature, controls may not always operate effectively to provide reasonable assurance that the service organization's service commitments and system requirements are achieved based on the applicable trust services criteria. Also, the projection to the future of any conclusions about the suitability of the design and operating effectiveness of controls is subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

Description of Tests of Controls

The specific controls tested, and the nature, timing, and results of those tests are presented in the section of our report titled "Description of Tests of Controls and Results Thereof."

Basis for Qualified Opinion

The accompanying description states the iAltA Private Market LLC's Verivend system is protected against unauthorized logical access with formalized access provisioning and deprovisioning controls. Based on inquires of management and observation of activities, we

determined that the Company did not have these controls in place during the reporting period.

Qualified Opinion

In our opinion, except for the matters referred to in the Basis for Qualified Opinion paragraph, in all material respects:

a. The description presents IPM's Verivend system that was designed and implemented throughout the period July 1, 2025 to December 31, 2025, in accordance with the description criteria.

b. The controls stated in the description were suitably designed throughout the period July 1, 2025 to December 31, 2025, to provide reasonable assurance that IPM's service commitments and system requirements would be achieved based on the applicable trust services criteria, if its controls operated effectively throughout the period and if the subservice organizations and user entities applied the complementary controls assumed in the design of IPM's controls throughout the period.

c. The controls stated in the description operated effectively throughout the period July 1, 2025 to December 31, 2025, to provide reasonable assurance that IPM's service commitments and system requirements were achieved based on the applicable trust services criteria, if complementary subservice organization controls and complementary user entity controls assumed in the design of IPM's controls operated effectively throughout the period.

Restricted Use

This report, including the Description of Tests of Controls and Results Thereof in the section of our report titled "Description of Test of Controls and Results Thereof" is intended solely for the information and use of IPM; user entities of IPM's Verivend system during some or all of the period July 1, 2025 to December 31, 2025, business partners of IPM's subject to risks arising from interactions with IPM's Verivend system; practitioners providing services to such user entities and business partners; prospective user entities and business partners; and regulators who have sufficient knowledge and understanding of the following:

- The nature of the service provided by the service organization.
- How the service organization's system interacts with user entities, subservice organizations, and other parties.
- Internal control and its limitations.
- Complementary subservice organization controls and how those controls interact with the controls at the service organization to achieve the service organization's service commitments and system requirements.
- User entity responsibilities and how they may affect the user entity's ability to effectively use the service organization's services.
- The applicable trust services criteria.
- The risks that may threaten the achievement of the service organization's service commitments and system requirements and how controls address those risks.

This report is not intended to be and should not be used by anyone other than these specified parties.

Richey, May & Co.

verivend
an iAltA company

Section II – Assertion of iAltA Private Markets, LLC's Management

We have prepared the accompanying description of iAlta Private Markets, LLC's (IPM) "Description of Its iAltA Verivend system for the period July 1, 2025 to December 31, 2025", (description) based on the criteria for a description of a service organization's system set forth in DC 200, *2018 Description Criteria for a Description of a Service Organization's System in a SOC 2 Report (With Revised Implementation Guidance — 2022)* in AICPA, *Description Criteria*, (description criteria). The description is intended to provide report users with information about iAltA's Verivend System that may be useful when assessing the risks arising from interactions with iAltA's Verivend system, particularly information about system controls that IPM has designed, implemented and operated to provide reasonable assurance that its service commitments and system requirements were achieved based on the trust services criteria relevant to security (applicable trust services criteria) set forth in TSP 100, *2017 Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy (With Revised Points of Focus — 2022)* in AICPA, *Trust Services Criteria*.

IPM uses subservice organizations as described below:

- Amazon Web Services (AWS): Provides cloud infrastructure services including compute, storage, database, monitoring, and security services. AWS hosts the production environment and provides services including Amazon S3, Amazon RDS, Amazon CloudWatch, AWS IAM, Amazon EventBridge, Amazon ECR, Amazon SNS, Amazon Inspector, and Amazon GuardDuty.
- Microsoft 365 (Microsoft Corporation): Provides email, calendar, and productivity services for corporate communications and collaboration.
- GitHub (Microsoft Corporation): Provides source code version control, repository management, and change tracking services for application development.

The description indicates that complementary subservice organization controls that are suitably designed and operating effectively are necessary, along with controls at IPM, to achieve IPM's service commitments and system requirements based on the applicable trust services criteria. The description presents IPM's controls, the applicable trust services criteria, and the types of complementary subservice organization controls assumed in the design of IPM's controls. The description does not disclose the actual controls at the subservice organizations.

The description indicates that complementary user entity controls that are suitably designed and operating effectively are necessary, along with controls at IPM, to achieve IPM's service commitments and system requirements based on the applicable trust services criteria. The description presents IPM's controls, the applicable trust services criteria, and the complementary user entity controls assumed in the design of IPM's controls.

We confirm, to the best of our knowledge and belief, that:

a. The description presents iAltA Verivend system that was designed and implemented throughout the period July 1, 2025 to December 31, 2025, in accordance with the description criteria.
b. The controls stated in the description were suitably designed throughout the period July 1, 2025 to December 31, 2025, to provide reasonable assurance that IPM's service commitments and system requirements would be achieved based on the applicable trust services criteria, if its controls operated effectively throughout that period, and if the subservice organizations and user entities applied the complementary controls assumed in the design of IPM's controls throughout that period.
c. The controls stated in the description operated effectively throughout the period July 1, 2025 to December 31, 2025, to provide reasonable assurance that IPM's service commitments and system requirements were achieved based on the applicable trust services criteria, if complementary subservice organization controls and complementary user entity controls assumed in the design of IPM's controls operated effectively throughout that period.

/s/ Jonathan Ebel, EVP – Engineering and Payments

iAltA Private Markets, LLC

February 23, 2026

Section III – iAltA Private Markets, LLC's Description of Its Verivend System

Company Background

iAltA Private Markets, LLC ('iAltA" or "the Company" or "IPM" or "the Organization") is a financial technology company specializing in payments automation and financial workflow infrastructure for private markets, including venture capital firms, private equity organizations, and fund administrators. The Company provides a comprehensive platform that centralizes and automates complex financial operations while maintaining strong security controls.

The Company's platform enables customers to manage high-value financial operations with greater accuracy, control, and visibility. Through secure payment orchestration across multiple payment rails, the platform supports capital calls, distributions, vendor payments, and other fund-related transactions, reducing manual processes and operational risk.

Overview of Services Provided

Description of iAltA's Verivend System

IPM's core product, the iAltA Verivend system (the "system"), is a cloud-based Software as a Service (SaaS) platform that enables customers to automate, manage, and monitor financial operations and payment workflows for private market transactions.

The system description in this section of the report details the iAltA Verivend system. Any other IPM services are not within the scope of this report.

The system includes the following core services and features:

- Payment Orchestration: Supports automated clearing house (ACH), wire transfers, real-time-payments (RTP), and check processing across multiple banking partners.
- Capital Call and Fund Payment Workflows: Automates the collection and distribution of capital for investment funds.
- Accounts Payable and Accounts Receivable Automation: Streamlines vendor payments and invoice processing.
- Reporting and Reconciliation: Provides real-time insight into payment activity, cash movement, and operational status.
- Secure application programming interface (API) Access: Enables system integrations with customer financial systems and third-party applications.
- Role-Based Access Controls: Configurable approval workflows and comprehensive audit logging to support internal controls and segregation of duties.

Use Case of Customers

Customers use the system to automate high-value financial operations and reduce operational risk in private market transactions. Typical users include venture capital firms, private equity organizations, fund administrators, and family offices.

By automating payment workflows and providing centralized visibility into financial operations, the system reduces manual processing errors, improves compliance with internal controls, and enables finance teams to focus on strategic activities rather than manual payment processing.

Principal Service Commitments and System Requirements

IPM designs its processes and procedures related to the system to meet its objectives. Those objectives are based on the service commitments that IPM makes to user entities, the laws and regulations that govern the provision of the services, and the financial, operational, and compliance requirements that IPM has established for the services. The system services are subject to the Security commitments established internally for its services.

IPM's commitments to users are communicated through Service Level Agreements (SLAs), Master Service Agreements (MSAs), and the Privacy Policy published on the Company's website. In addition, key terms, security measures, and service expectations are outlined in the description of the service, product materials, and onboarding documentation provided to customers. Ongoing updates about system availability, feature changes, or security commitments are communicated through email notifications, customer success check-ins, and in-product announcements.

Security Commitments

Security commitments include, but are not limited to, the following:

- System features and configuration settings designed to authorize user access while restricting unauthorized users from accessing information not needed for their role.
- Use of intrusion detection systems to prevent and identify potential security attacks from users outside the boundaries of the system.
- Regular vulnerability scans over the system and network, and penetration tests over the production environment.
- Operational procedures for managing security incidents and breaches, including notification procedures.
- Use of encryption technologies to protect customer data both at rest and in transit.
- Use of data retention and data disposal procedures.

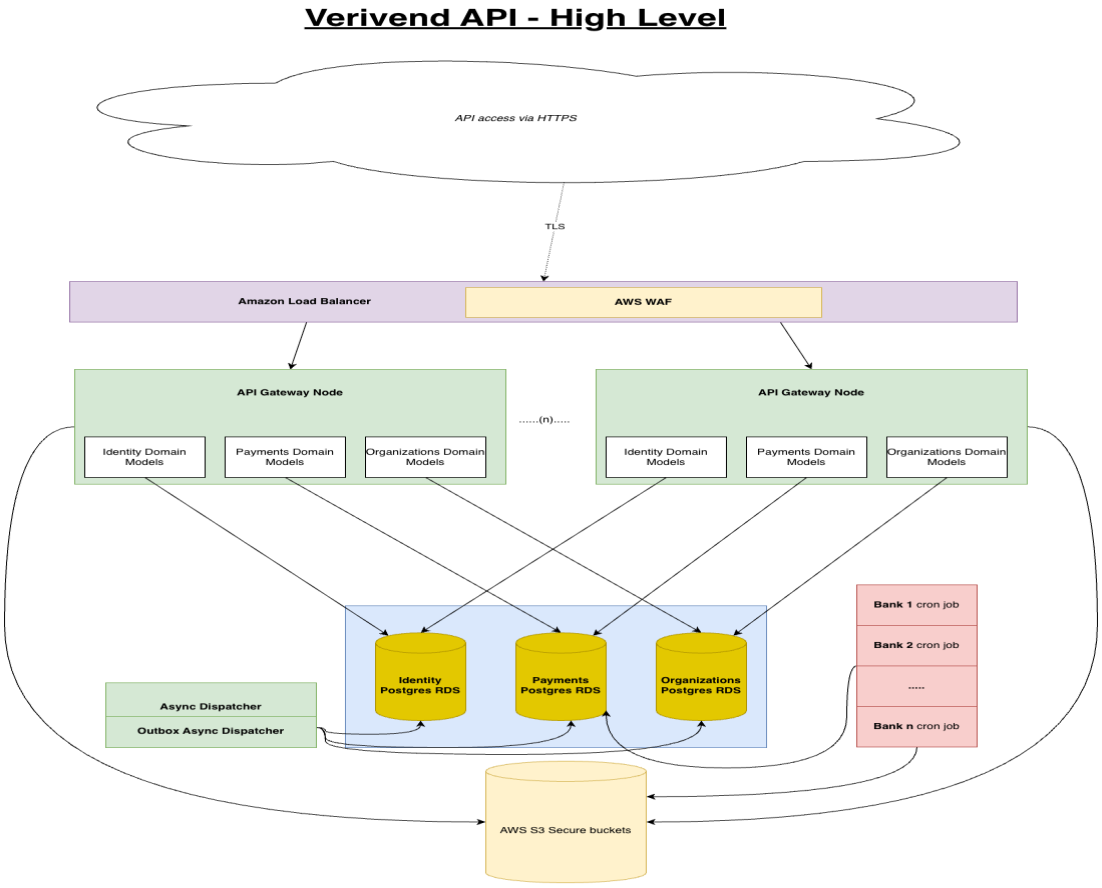
Components of the System

The System description is comprised of the following components:

- **Software:** The application programs and information technology (IT) system software that supports application programs, the types of databases used, the nature of external facing web applications, and the nature of applications developed in-house.
- **People:** The personnel involved in the governance, operation, security, and use of a system (business unit personnel, developers, operators, user entity personnel, vendor personnel, and managers).
- **Data:** The types of data used by the system, such as transaction streams, files, databases, tables, and output used or processed by the system.
- **Procedures:** The automated and manual procedures related to the services provided, including procedures by which service activities are initiated, authorized, performed, and delivered.

Infrastructure

IPM maintains a system inventory that includes virtual machines and containers. The inventory documents device name, inventory type, description, and owner. The System is hosted exclusively on Amazon Web Services (AWS) utilizing a containerized architecture within a Virtual Private Cloud (VPC) in the us-east-1 region.



Hardware	Type	Purpose
AWS Elastic Container Service	AWS	Provides scalable compute capacity for system workloads.
AWS Application Load Balancer	AWS	Distributes internal and external traffic to ensure availability and performance.
Virtual Private Cloud (VPC)	AWS	Protects the network perimeter and restricts inbound and outbound access.
AWS S3	AWS	Object storage used for secure file upload, download, and archival.
AWS RDS (PostgreSQL)	AWS	Managed relational database service for customer and transaction data.

Software

IPM is responsible for managing the development and operation of the iAltA Verivend system including infrastructure components such as servers, databases, and storage systems. The in-scope infrastructure and software components are shown in the table below:

System/Application	Type	Purpose
Amazon Web Services (AWS)	Cloud Infrastructure	Cloud infrastructure and hosting platform.
Drata	SaaS	Compliance automation and security monitoring platform.
GitHub	SaaS	Version control and source code management.
Justworks	SaaS	Human resources information system (HRIS).
Slack	SaaS	Internal communication and collaboration.

Data

Data as defined by IPM, constitutes the following:

User and account data - this includes Personally Identifiable Information (PII) and other data from employees, customers, users (customers' employees), and other third parties such as suppliers, vendors, business partners, and contractors. This collection is permitted under the Terms of Service and Privacy Policy. Access to PII is controlled through processes for provisioning system permissions, as well as ongoing monitoring activities, to ensure that sensitive data is restricted to employees based on job function.

Data is categorized into four major types of data used by IPM:

Category	Description	Examples
Public	Public information is not confidential and can be made public without any implications for IPM.	Press releases, Public website
Internal	Access to internal information is approved by Management and is protected from external access.	Internal memos, Design documents
Customer Data	Information received from customers for processing or storage. IPM must uphold the highest levels of integrity, confidentiality, and restricted availability.	Customer PII, Transaction data, Bank account information
Company Data	Information collected and used by IPM to operate the business with highest levels of protection.	Legal documents, Employee PII, Contracts

People

IPM is structured with clearly defined responsibilities across all core business functions, including product development, infrastructure, security, operations, customer success, and commercial strategy. Each area is managed by experienced leadership to ensure the system's reliability, security, and customer satisfaction.

The Company is organized into the following functional areas:

- **Management:** Oversees strategic direction, operational execution, and organizational compliance.
- **Chief Technology Officer (CTO):** Leads all aspects of product development, infrastructure, security operations, and system availability.
- **Head of Infrastructure:** Manages production infrastructure, access controls, and security for production systems.

- **Director of Payment & Compliance Operations:** Oversees payment operations, bank support, and compliance operations.
- **Policy Owner:** Responsible for policy documentation and maintenance.
- **Product Development:** Designs, builds, and maintains the iAltA Verivend system, including the full software development lifecycle and secure coding practices.
- **Operations & IT:** Maintains production infrastructure and access controls, enforces endpoint security, and manages identity and device security across the Organization.
- **Customer Success & Support:** Focused on onboarding, training, and ongoing support to ensure a successful experience with the system.

All team members follow documented procedures and operate under strict access control policies. Data security and operational consistency are maintained through adherence to least privilege access principles and continuous monitoring.

Processes and Procedures

Management has developed and communicated policies and procedures to manage the information security of the system. Changes to these procedures are performed annually and authorized by Management, the Executive Team, and control owners. These procedures cover the following key security life cycle areas:

- Physical Security
- Logical Access
- Availability
- Change Control
- Data Communications
- Risk Assessment
- Data Retention
- Vendor Management

Physical Access

IPM's production servers are maintained by AWS. The physical and environmental security protections are the responsibility of AWS. IPM reviews the attestation reports and performs a risk analysis of AWS on at least an annual basis.

The Company operates as a remote-first Organization and does not maintain physical office space that houses production systems or customer data. All production infrastructure is hosted in AWS data centers, which maintain SOC 2 attestation reports covering physical and environmental security controls.

Logical Access

IPM provides employees and contractors with access to infrastructure via a role-based access control system, to ensure uniform, least privileged access to identified users and to maintain simple and repeatable user provisioning and deprovisioning processes.

Access to these systems is split into admin roles, user roles, and no access roles. User access and rules are reviewed on an annual basis to ensure least privileged access.

Operations are responsible for provisioning access to the system based on the employee's role and performing a background check. The employee is responsible for reviewing IPM's policies and completing security training. These steps must be completed within thirty days of hire.

When an employee is terminated, Operations is responsible for deprovisioning access to all in-scope systems within one business day of the employee's termination.

Computer Operations - Backup

Customer data is backed up and monitored by the CTO for completion and exceptions. If there is an exception, the CTO will perform troubleshooting to identify the root cause and either rerun the backup or address as part of the next scheduled backup job.

Backup infrastructure is maintained in AWS. Backups are encrypted, with access restricted to key personnel. Database backups are performed automatically with point-in-time recovery capabilities.

Incident Response

IPM maintains an Incident Response Plan to guide employees on reporting and responding to any information security or data privacy events or incidents. Procedures are in place for identifying, reporting and acting upon breaches or other incidents.

IPM internally monitors all applications, including the web user interface (UI), databases, and cloud storage to ensure that service delivery matches SLA requirements. Infrastructure monitoring tools generate automated alerts when predefined thresholds are exceeded.

IPM utilizes vulnerability scanning software that checks source code for common security issues as well as for vulnerabilities identified in open-source dependencies and maintains an internal SLA for responding to those issues.

Change Management

IPM maintains documented Systems Development Life Cycle (SDLC) policies and procedures to guide personnel in documenting and implementing application and infrastructure changes. Change control procedures include change request and initiation processes, documentation requirements, development practices, quality assurance testing requirements, and required approval procedures.

GitHub is utilized to document the change control procedures for changes in the application and implementation of new changes. Quality assurance testing results are documented and maintained with the associated change request. Development and testing are performed in an environment that is logically separated from the production environment. Management approves changes prior to migration to the production environment through pull request reviews.

Version control software is utilized to maintain source code versions and migrate source code through the development process to the production environment. The version control software maintains a history of code changes to support rollback capabilities and tracks changes to developers.

Data Communications

IPM utilizes AWS cloud infrastructure to run its production environment. The architecture simplifies logical network configuration by providing an effective firewall around all IPM application containers, with the only ingress from the network via Hyper Text Transfer Protocol Secure (HTTPS) connections to designated web frontend endpoints.

AWS infrastructure also automates the provisioning and deprovisioning of containers to match the desired configuration; if an application container fails, it will be automatically replaced, regardless of whether that failure is in the application or on underlying hardware.

IPM uses automated monitoring services to perform vulnerability scans and engages an external firm to perform annual penetration testing to look for unidentified vulnerabilities, and the engineering team responds to any issues identified via the regular incident response and change management process. All data transmission is encrypted using Transport Layer Security (TLS) 1.2 or higher. API communications are authenticated using secure tokens and encrypted connections.

Applicability of Report

IPM has considered the service characteristics, obligations and commitments related to the iAltA Verivend system to determine the applicability of the SOC 2 Trust Services Criteria ("TSC") for the in-scope services as described below in the section "System Boundaries and Scope." Based on the guidance from AICPA, Management has determined that the SOC 2 TSC of the Security principle is relevant.

System Boundaries and Scope

The boundaries of the iAltA Verivend system are the specific aspects of the Company's infrastructure, software, people, procedures, and data necessary to provide its services and that directly support the services provided to customers. Any infrastructure, software, people, procedures, and data that indirectly support the services provided to customers are not included within the boundaries of the iAltA Verivend system.

This report does not include the Cloud Hosting Services provided by AWS at multiple facilities.

Relevant Aspects of the Control Environment, Risk Assessment, Information & Communication, Monitoring and Control Activities

Management Philosophy

The IPM Management Team must balance two competing interests: continuing to grow and develop in a cutting edge, rapidly changing financial technology space while remaining excellent and conservative stewards of the highly sensitive financial data and workflows customers entrust to the Company.

The Management Team meets frequently to be briefed on technology changes that impact the way IPM can help customers manage financial workflows, as well as new security technologies that can help protect those workflows, and finally any regulatory changes that may require IPM to alter its software to maintain legal compliance. Major planned changes to the business are

also reviewed by the Management Team to ensure they can be conducted in a way that is compatible with core product offerings and duties to new and existing customers.

Specific control activities that IPM has implemented in this area are described below:

- Management is periodically briefed on regulatory and industry changes affecting the services provided.
- Executive Management meetings are held to discuss major initiatives and issues that affect the business.

Organizational Structure and Assignment of Authority and Responsibility

IPM's organizational structure provides the framework within which its activities for achieving Company-wide objectives are planned, executed, controlled, and monitored. Management believes establishing a relevant organizational structure includes considering key areas of authority and responsibility. An organizational structure has been developed to suit its needs. This organizational structure is based, in part, on its size and the nature of its activities.

IPM's assignment of authority and responsibility activities include factors such as how authority and responsibility for operating activities are assigned and how reporting relationships and authorization hierarchies are established. It also includes policies relating to appropriate business practices, knowledge, and experience of key personnel, and resources provided for carrying out duties.

Specific control activities that IPM has implemented in this area are described below:

- Organizational Charts are in place to communicate key areas of authority and responsibility.
- Organizational Charts are communicated to employees and updated as needed.

Human Resource Policies and Practices

IPM's success is founded on sound business ethics, reinforced with a high level of efficiency, integrity, and ethical standards. The result of this success is evidenced by its proven track record for hiring and retaining top quality personnel who ensure the service organization is operating at maximum efficiency. IPM's Human Resources policies and practices relate to employee hiring, orientation, training, evaluation, counseling, promotion, compensation, and disciplinary activities.

Specific control activities that IPM has implemented in this area are described below:

- New employees are required to sign acknowledgment forms for the Employee Handbook and a Confidentiality Agreement following new hire orientation on their first day of employment.
- Evaluations for each employee are performed on an annual basis.
  Personnel termination procedures are in place to guide the termination process and are documented in a Termination Checklist.

Risk Assessment Process

IPM's risk assessment process identifies and manages risks that could potentially affect IPM's ability to provide reliable and secure services to customers. As part of this process, IPM maintains a Risk Register to track all systems and procedures that could present risks to meeting the Company's objectives. Risks are evaluated by likelihood and impact, and

Management creates tasks to address risks that score highly on both dimensions. The risk register is reevaluated annually, and tasks are incorporated into the regular IPM product development process so they can be dealt with predictably and iteratively.

Integration with Risk Assessment

The environment in which the system operates; the commitments, agreements, and responsibilities of IPM's system; as well as the nature of the components of the system result in risks that the criteria will not be met. IPM addresses these risks through the implementation of suitably designed controls to provide reasonable assurance that the criteria are met. Because each system and the environment in which it operates are unique, the combination of risks to meeting the criteria and the controls necessary to address the risks will be unique. As part of the design and operation of the system, IPM's Management identifies the specific risks that the criteria will not be met and the controls necessary to address those risks.

Information and Communication Systems

Information and communication are an integral component of IPM's internal control system. It is the process of identifying, capturing, and exchanging information in the form and time frame necessary to conduct, manage, and control the entity's operations.

IPM uses several information and communication channels internally to share information with management, employees, contractors, and customers. IPM uses Slack and email as the primary internal and external communications channels.

Structured data is communicated internally via SaaS applications and project management tools. Finally, IPM uses virtual "all hands" meetings to communicate Company priorities and goals from Management to all employees.

Monitoring Controls

Management monitors controls to ensure that they are operating as intended and that controls are modified as conditions change. IPM's Management performs monitoring activities to continuously assess the quality of internal control over time. Necessary corrective actions are taken as required to correct deviations from Company policies and procedures. Employee activity and adherence to Company policies and procedures are also monitored. This process is accomplished through ongoing monitoring activities, separate evaluations, or a combination of the two.

On-Going Monitoring

IPM's Management conducts quality assurance monitoring on a regular basis and additional training is provided based upon results of monitoring procedures. Monitoring activities are used to initiate corrective action through Department meetings, internal conference calls, and informal notifications.

Management's close involvement in IPM's operations helps to identify significant variances from expectations regarding internal controls. Upper Management evaluates the facts and circumstances related to any suspected control breakdown. A decision for addressing any control's weakness is made based on whether the incident was isolated or requires a change in the Company's procedures or personnel. The goal of this process is to ensure legal compliance and to maximize the performance of IPM's personnel.

Reporting Deficiencies

IPM's internal risk management tracking tool (Drata) is utilized to document and track the results of on-going monitoring procedures. Escalation procedures are maintained for responding and notifying Management of any identified risks, and instructions for escalation are supplied to employees in Company policy documents. Risks receiving a high rating are responded to immediately. Corrective actions, if necessary, are documented and tracked within the internal tracking tool. Annual risk meetings are held for Management to review reported deficiencies and corrective actions.

Integrity and Ethical Values

The effectiveness of controls cannot rise above the integrity and ethical values of the people who create, administer, and monitor them. Integrity and ethical values are essential elements of IPM's control environment, affecting the design, administration, and monitoring of other components. Integrity and ethical behavior are the product of IPM's ethical and behavioral standards, how they are communicated, and how they are reinforced in practices.

IPM maintains a Code of Conduct that establishes the standards and expectations for ethical behavior. All employees and contractors are required to acknowledge the Code of Conduct during onboarding and annually thereafter. The Code of Conduct addresses conflicts of interest, confidentiality, data protection, and compliance with laws and regulations.

Violations of the Code of Conduct are subject to disciplinary action, up to and including termination of employment or contract.

Commitment to Competence

IPM's Management defines competence as the knowledge and skills necessary to accomplish tasks that define employees' roles and responsibilities. Management's commitment to competence includes Management's consideration of the competence levels for jobs and how those levels translate into the requisite skills and knowledge.

Specific control activities that IPM has implemented in this area are described below:

- Management has considered the competence levels for particular jobs and translated required skills and knowledge levels into written position requirements.
- Training is provided to maintain the skill level of personnel in certain positions.

Changes to the System During the Period

No significant changes to disclose during the reporting period.

Complementary Subservice Organization Controls and Monitoring

A service organization's controls may be designed with the assumption that the subservice organizations will have implemented complementary subservice organization controls that are necessary to achieve the prescribed criteria. Subservice organization controls are implemented by the subservice organizations and are necessary to achieve the criteria related to Security, stated in Management's description of the service organization's system.

The risks that Management identifies also include the risk that such controls were not implemented by subservice organizations or that those controls were not operating effectively. IPM's controls were designed with the understanding that the following types of controls have been implemented at the subservice organization in support of the specified criteria.

Complementary Subservice Organization Controls			
Amazon Web Services (AWS)			**Related TSC**
1	Physical security controls over data center facilities including environmental controls, fire detection and suppression, and physical access restrictions.	☐	**CC6.4**
2	Logical access controls to restrict access to computing resources to authorized personnel.	☐	**CC6.1, CC6.2, CC6.3**
3	Network security controls including firewalls, intrusion detection, and network segmentation.	☐	**CC6.6, CC6.7**
4	Data encryption controls for data at rest and data in transit.	☐	**CC6.1, CC6.7**
5	Backup and recovery controls to ensure data availability and recoverability.	☐	**CC7.5**
6	Monitoring and logging controls to detect and respond to security events.	☐	**CC7.2, CC7.3**
7	Change management controls for infrastructure changes.	☐	**CC8.1**
8	Vulnerability management and patch management controls for the underlying infrastructure.	☐	**CC7.1**

Microsoft 365 (Microsoft Corporation)		Related TSC
1	Access security controls including logical access restrictions and multi-factor authentication.	CC6.1, CC6.2, CC6.3, CC6.6
2	Data protection controls including encryption, data loss prevention, and email security.	CC6.1, CC6.7, CC7.2
3	Monitoring, audit logging, and incident response controls for user activity and security events.	CC7.2, CC7.3, CC7.4, CC7.5
4	Physical and environmental safeguards over data center facilities.	CC6.4
GitHub (Microsoft Corporation)		**Related TSC**
1	Logical access controls to restrict access to source code repositories to authorized users.	CC6.1, CC6.2, CC6.3
2	Authentication controls including multi-factor authentication for repository access.	CC6.1, CC6.6
3	Data encryption controls for code repositories at rest and in transit.	CC6.1, CC6.7
4	Audit logging and monitoring controls for repository activities and access attempts.	CC7.2, CC7.3
5	Version control and change tracking capabilities for source code management.	CC8.1
6	Physical and environmental controls over data center facilities.	CC6.4

IPM's Management, along with the subservice providers, define the scope and responsibility of the controls necessary to meet all the relevant trust services criteria through written contracts, such as service level agreements. In addition, IPM performs monitoring of the subservice organization controls, including the following procedures:

- Reviewing and reconciling output reports;
- Holding periodic discussions with vendors and subservice organizations;
- Maintain a third-party risk management assessment and questionnaire process that is completed at onboarding and on an annual basis thereafter;
- Testing controls performed by vendors and subservice organizations;
- Reviewing attestation reports over services provided by vendors and subservice organizations;
- Monitoring external communications, such as customer complaints relevant to the services by the subservice organization.

Complementary User Entity Controls

iAltA's Verivend System is designed with the assumption that certain controls will be implemented by user entities. Such controls are called complementary user entity controls. It is not feasible for the Security Trust Services Criteria related to IPM's services to be solely achieved by IPM's control procedures. Accordingly, user entities, in conjunction with the iAltA Verivend System, should establish their own internal controls or procedures to complement those of IPM.

The following complementary user entity controls should be implemented by user entities to provide additional assurance that the Trust Services Criteria described within this report is met. As these items represent only a part of the control considerations that might be pertinent at the user entities' locations, user entities should exercise judgment in selecting and reviewing these complementary user entity controls.

	Complementary Subservice Organization Controls	Related TSC
1	User entities are responsible for authorizing and managing user access to the system, including timely notification to IPM when access should be modified or revoked due to personnel changes.	CC6.1, CC6.2, CC6.3
2	User entities are responsible for ensuring their users protect authentication credentials, utilize multi-factor authentication, and comply with password requirements when accessing the system.	CC6.1, CC6.6
3	User entities are responsible for maintaining appropriate security controls on endpoints used to access the system, including current security patches and anti-malware software.	CC6.6, CC6.8
4	User entities are responsible for ensuring their personnel receive appropriate security awareness training and understand their responsibilities for protecting system access and data.	CC1.4, CC2.2
5	User entities are responsible for promptly reporting suspected security incidents, unauthorized access, or vulnerabilities to IPM.	CC7.3, CC7.4
6	User entities are responsible for reviewing the SOC 2 report and implementing complementary controls within their environment as appropriate based on their specific requirements.	CC3.2

Section IV – Description of Test of Controls and Results Thereof

Information Provided by Richey, May & Co., LLP

This report on controls design is intended to provide users of the report with information sufficient to obtain an understanding of those aspects of iAltA's Verivend System controls that may be relevant to user entity's internal controls. This report, when coupled with an understanding of the internal controls in place at each user entity, is intended to assist in the assessment of the total internal control surrounding the services provided by IPM.

Our examination was limited to those controls performed at IPM's locations related to the iAltA's Verivend System. It is each stakeholder's responsibility to evaluate this information in relation to the internal controls in place at each user entity to obtain an overall understanding of the internal controls and assess control risk. The portion of controls provided by each user entity and IPM must be evaluated together. If effective control activities are not in place at the user entity, IPM's controls may not compensate for such weaknesses.

Our examination included inquiries of appropriate management, supervisory, and staff personnel, inspection of documents and records, observation of activities and operations, and tests of the design of controls surrounding iAltA's Verivend System. Our tests of the design and operating effectiveness of controls were performed for the period July 1, 2025 to December 31, 2025, and were applied to those controls relating to the applicable Trust Services Criteria.

The description of controls is the responsibility of IPM's Management. Our responsibility is to express an opinion that the controls designed effectively to provide reasonable, but not absolute, assurance that the control criteria, specified by the American Institute of Certified Public Accountants (AICPA), were designed and operating effectively for the period of July 1, 2025 to December 31, 2025.

Sampling: Consistent with AICPA authoritative literature, Richey May utilizes professional judgment to consider the tolerable deviation rate, the expected deviation rate, the audit risk, the characteristics of the population, and other factors, in order to determine the number of items to be selected in a sample for a particular test. Richey May, in accordance with AICPA authoritative literature, selected samples in such a way that samples were expected to be representative of the population. This included judgmental selection methods, where applicable, to ensure representative samples were obtained. System-generated population listings were obtained whenever possible and evaluated for accuracy and completeness prior to selecting samples. In some instances, full populations were tested in cases including but not limited to, the uniqueness of the event or low overall population size.

Test Results: The results of each test applied are listed alongside each representative test applied within the Testing Matrices. Test results not deemed as control deviations are noted by the phrase "No exceptions noted." in the Results of Testing column of the Testing Matrices. Any phrase other than the aforementioned constitutes a test result that is the result of a change in the application of the control activity, a deficiency in the operating effectiveness of the control activity, or a disclosure related to the non-occurrence of the condition(s) that would warrant the operation of the control. Testing deviations identified within the Testing Matrices are not necessarily weaknesses in the total system of controls at user entities, as this determination can only be made after consideration of controls in place at user entities, and other factors.

Control considerations that should be implemented by user entities in order to complement the control activities and achieve the stated control objective are presented in the "Complementary User Entity Controls" within Section III.

Control considerations that should be implemented by subservice organization in order to complement the control activities and achieve the stated control objective are presented in the "Complementary Subservice Organization Controls and Monitoring" within Section III.

Trust Services Criteria and Principles

Common Criteria (Security Principle)
The Security principle refers to the protection of information and systems against unauthorized access, unauthorized disclosure of information, and damage to systems that could compromise the availability, integrity, confidentiality, and privacy of information or systems and affect the entity's ability to achieve its objectives. Controls over the security of a system prevent or detect the breakdown and circumvention of segregation of duties, system failure, incorrect processing, theft or other unauthorized removal of data or system resources, misuse of software, and improper access to, or use of, alteration, destruction, or disclosure of information.

‘

Scope Trust Services Principles and Test of Controls and Results

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC1.0 - Control Environment			
CC1.1 - COSO Principle 1: The entity demonstrates a commitment to integrity and ethical values.			
CC1.1.1	Internal communication channels are in place for employees to report failures, events, incidents, policy violations, concerns, and other issues to Company Management.	Inspected the reporting records and noted that employees have access to internal reporting channels and used the channels as needed.	No exceptions noted.
CC1.1.2	The Company maintains a documented Code of Conduct. Eligible personnel are required to acknowledge the Company's Code of Conduct during onboarding and annually thereafter.	Inspected the documented Code of Conduct and noted it is maintained by the Company. Inspected the acknowledgment records for a sample of employees and noted compliance with annual acknowledgment requirements.	No exceptions noted. No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC1.2 - COSO Principle 2: The board of directors demonstrates independence from management and exercises oversight of the development and performance of internal control.			
CC1.2.1	The Board of Directors includes members independent from Management who are not involved in control operations.	Inspected the Board of Directors' composition and noted members are independent from Management.	No exceptions noted.
CC1.2.2	The Company's Board of Directors meets quarterly with Management to review Company performance, strategic objectives, compliance initiatives, and security and privacy risk and mitigation strategies. Meeting minutes, including decisions made and action items, are documented.	Inspected the Board of Directors meeting agendas and minutes noting that meetings were conducted on a quarterly basis and that the documentation included records of decisions made and associated action items.	No exceptions noted.
CC1.3 - COSO Principle 3: Management establishes, with board oversight, structures, reporting lines, and appropriate authorities and responsibilities in the pursuit of objectives.			
CC1.3.1	An Organizational Chart is in place to describe the Organizational structure and reporting lines. The chart is updated upon changes to the Organizational structure.	Inspected the Organizational Chart noting it described the Organizational structure and reporting lines and was updated upon changes to the Organizational structure.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC1.4 - COSO Principle 4: The entity demonstrates a commitment to attract, develop, and retain competent individuals in alignment with objectives.			
CC1.1.2	The Company maintains a documented Code of Conduct. Eligible personnel are required to acknowledge the Company's Code of Conduct during onboarding and annually thereafter.	Inspected the documented Code of Conduct and noted it is maintained by the Company. Inspected the acknowledgment records for a sample of employees and noted compliance with annual acknowledgment requirements.	No exceptions noted. No exceptions noted.
CC1.4.1	The Company has documented job descriptions for each position at the Company, which include roles and responsibilities as well as required qualifications, skills, and experience for the role.	Inspected a sample of documented job descriptions and noted they include roles, responsibilities, required qualifications, skills, and experience for each position at the Company.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC1.4.2	The Company has established training programs to help personnel gain awareness of information security best practices. Personnel (including employees and contractors as applicable) are required to complete the training during onboarding. Periodic refresher training is provided to personnel at least annually and as deemed necessary (e.g., upon changes in security requirements, policies, regulations, etc.).	Inspected the training records for a sample of new hires and noted training was completed during onboarding. Inspected the training records for a sample of employees and noted training was completed at least annually.	No exceptions noted. No exceptions noted.
CC1.5 - COSO Principle 5: The entity holds individuals accountable for their internal control responsibilities in the pursuit of objectives.			
CC1.1.2	The Company maintains a documented Code of Conduct. Eligible personnel are required to acknowledge the Company's Code of Conduct during onboarding and annually thereafter.	Inspected the documented Code of Conduct and noted it is maintained by the Company. Inspected the acknowledgment records for a sample of employees and noted compliance with annual acknowledgment requirements.	No exceptions noted. No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC1.3.1	An Organizational Chart is in place to describe the Organizational structure and reporting lines. The chart is updated upon changes to the Organizational structure.	Inspected the Organizational Chart noting it described the Organizational structure and reporting lines and was updated upon changes to the Organizational structure.	No exceptions noted.
CC1.1.1	Internal communication channels are in place for employees to report failures, events, incidents, policy violations, concerns, and other issues to Company Management.	Inspected the reporting records and noted that employees have access to internal reporting channels and used the channels as needed.	No exceptions noted.
CC2.0 - Communication and Information			
CC2.1 - COSO Principle 13: The entity obtains or generates and uses relevant, quality information to support the functioning of internal control.			
CC2.1.1	A documented architectural diagram is in place to document system boundaries and support the functioning of internal control. The diagram is reviewed and approved by Management at least annually and updated as necessary when there are changes to the environment.	Inspected the architectural diagram and noted it documented system boundaries and supports the functioning of internal control and was reviewed and approved annually.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC2.1.2	The Company has defined and documented a Information Security Policy to support the functioning of internal control.	Inspected the Information Security Policy and noted it is defined and documented to support the functioning of internal control.	No exceptions noted.
CC2.1.3	A centralized asset register is maintained for physical, cloud, and other assets that includes descriptive attributes for asset accountability such as owner, description, classification, and/or other information based on the type of asset. Processes are in place to maintain an updated inventory through automated mechanisms.	Inspected the centralized asset register and noted it includes descriptive attributes for asset accountability. Inspected the asset inventory and noted it is updated through manual reviews and automated mechanisms as needed.	No exceptions noted. No exceptions noted.
CC2.2 - COSO Principle 14: The entity internally communicates information, including objectives and responsibilities for internal control, necessary to support the functioning of internal control.			
CC1.1.2	The Company maintains a documented Code of Conduct. Eligible personnel are required to acknowledge the Company's Code of Conduct during onboarding and annually thereafter.	Inspected the documented Code of Conduct and noted it is maintained by the Company. Inspected the acknowledgment records for a sample of employees and noted compliance with annual acknowledgment requirements.	No exceptions noted. No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC1.2.2	The Company's Board of Directors meets quarterly with Management to review Company performance, strategic objectives, compliance initiatives, and security and privacy risk and mitigation strategies. Meeting minutes, including decisions made and action items, are documented.	Inspected the Board of Directors meeting agendas and minutes and noted that meetings were conducted on a quarterly basis and that the documentation included records of decisions made and associated action items.	No exceptions noted.
CC1.3.1	An Organizational Chart is in place to describe the Organizational structure and reporting lines. The chart is updated upon changes to the Organizational structure.	Inspected the Organizational Chart noting it described the Organizational structure and reporting lines and was updated upon changes to the Organizational structure.	No exceptions noted.
CC1.4.1	The Company has documented job descriptions for each position at the Company, which include roles and responsibilities as well as required qualifications, skills, and experience for the role.	Inspected a sample of documented job descriptions and noted they include roles, responsibilities, required qualifications, skills, and experience for each position at the Company.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC1.4.2	The Company has established training programs to help personnel gain awareness of information security best practices. Personnel (including employees and contractors as applicable) are required to complete the training during onboarding. Periodic refresher training is provided to personnel at least annually and as deemed necessary (e.g., upon changes in security requirements, policies, regulations, etc.).	Inspected the training records for a sample of new hires and noted training was completed during onboarding. Inspected the training records for a sample of employees and noted training was completed at least annually.	No exceptions noted. No exceptions noted.
CC1.1.1	Internal communication channels are in place for employees to report failures, events, incidents, policy violations, concerns, and other issues to Company Management.	Inspected the reporting records and noted that employees have access to internal reporting channels and used the channels as needed.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC2.3 - COSO Principle 15: The entity communicates with external parties regarding matters affecting the functioning of internal control.			
CC1.2.2	The Company's Board of Directors meets quarterly with Management to review Company performance, strategic objectives, compliance initiatives, and security and privacy risk and mitigation strategies. Meeting minutes, including decisions made and action items, are documented.	Inspected the Board of Directors meeting agendas and minutes and noted that meetings were conducted on a quarterly basis and that the documentation included records of decisions made and associated action items.	No exceptions noted.
CC2.3.1	The Company maintains a publicly available Terms of Service for use of the system. All users must agree to the Terms of Service prior to using the system.	Inspected the Terms of Service and noted it is publicly available. Inspected the user agreements and noted all users agreed to the terms of service prior to using the system.	No exceptions noted. No exceptions noted.
CC2.3.2	The Company maintains a publicly available Privacy Policy.	Inspected the Privacy Policy and noted it is publicly available on the Company's website.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC2.3.3	The Company communicates system changes via release notes.	Inspected a sample of release notes and noted the communication of system changes via release notes.	No exceptions noted.
CC3.0 - Risk Assessment			
CC3.1 - COSO Principle 6: The entity specifies objectives with sufficient clarity to enable the identification and assessment of risks relating to objectives.			
CC3.1.1	The Company conducts risks assessments annually. The risk assessment includes consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner is assigned to each risk, and every risk is assigned a risk treatment option. Results of the risk assessment are documented in a risk register.	Inspected the risk assessment and noted it was completed on an annual basis and included consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner was assigned to each risk, and every risk was assigned a risk treatment option. Results of the risk assessment were documented in a risk register.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.1.2	The Company has defined and documented a process for risk assessment and risk management that outlines the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	Inspected the Company's Risk Assessment Policy and noted it had been defined and documented a process for risk assessment and risk management that outlined the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	No exceptions noted.
CC3.2 - COSO Principle 7: The entity identifies risks to the achievement of its objectives across the entity and analyzes risks as a basis for determining how the risks should be managed.			
CC3.1.1	The Company conducts risks assessments annually. The risk assessment includes consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner is assigned to each risk, and every risk is assigned a risk treatment option. Results of the risk assessment are documented in a risk register.	Inspected the risk assessment and noted it was completed on an annual basis and included consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner was assigned to each risk, and every risk was assigned a risk treatment option. Results of the risk assessment were documented in a risk register.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.1.2	The Company has defined and documented a process for risk assessment and risk management that outlines the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	Inspected the Company's Risk Assessment Policy and noted it had been defined and documented a process for risk assessment and risk management that outlined the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	No exceptions noted.
CC3.2.1	The Company conducts vulnerability scans of the production environment continuously. Results are reviewed by Company personnel and vulnerabilities are tracked to resolution.	Inspected the vulnerability scan results during the reporting period and noted they were performed continuously and results were reviewed and vulnerabilities were tracked to resolution.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.2.2	The Company obtains and reviews compliance reports or other evidence for critical vendors and service providers at least annually to monitor the third parties' compliance with industry frameworks, regulations, and standards. Results of the review and action items, if any, are documented.	Inspected the compliance reports for a sample of critical vendors and service providers and noted Management reviewed the results on an annual basis.	No exceptions noted.
CC3.2.3	The Company performs due diligence activities prior to engaging with a new service provider or vendor. Results of the due diligence activities including action items are documented.	Inspected the due diligence performed for a sample of new service providers and noted results of the due diligence activities including action items were documented.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.3 - COSO Principle 8: The entity considers the potential for fraud in assessing risks to the achievement of objectives.			
CC3.1.1	The Company conducts risks assessments annually. The risk assessment includes consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner is assigned to each risk, and every risk is assigned a risk treatment option. Results of the risk assessment are documented in a risk register.	Inspected the risk assessment and noted it was completed on an annual basis and included consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner was assigned to each risk, and every risk was assigned a risk treatment option. Results of the risk assessment were documented in a risk register.	No exceptions noted.
CC3.1.2	The Company has defined and documented a process for risk assessment and risk management that outlines the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	Inspected the Company's Risk Assessment Policy and noted it had been defined and documented a process for risk assessment and risk management that outlined the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.4 - COSO Principle 9: The entity identifies and assesses changes that could significantly impact the system of internal control.			
CC3.1.1	The Company conducts risks assessments annually. The risk assessment includes consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner is assigned to each risk, and every risk is assigned a risk treatment option. Results of the risk assessment are documented in a risk register.	Inspected the risk assessment and noted it was completed on an annual basis and included consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner was assigned to each risk, and every risk was assigned a risk treatment option. Results of the risk assessment were documented in a risk register.	No exceptions noted.
CC3.1.2	The Company has defined and documented a process for risk assessment and risk management that outlines the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	Inspected the Company's Risk Assessment Policy and noted it had been defined and documented a process for risk assessment and risk management that outlined the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC4.0 - Monitoring Activities			
CC4.1 - COSO Principle 16: The entity selects, develops, and performs ongoing and/or separate evaluations to ascertain whether the components of internal control are present and functioning.			
CC3.2.1	The Company conducts vulnerability scans of the production environment continuously. Results are reviewed by Company personnel and vulnerabilities are tracked to resolution.	Inspected the vulnerability scan results during the reporting period and noted they were performed continuously and results were reviewed and vulnerabilities were tracked to resolution.	No exceptions noted.
CC4.1.1	An external penetration test is performed by an independent third party annually. Results are reviewed by Management and vulnerabilities are tracked to resolution in accordance with Company policies.	Inspected the external penetration test results and noted it was completed on an annual basis by an independent third party and noted results were reviewed and vulnerabilities were tracked to resolution by Management in accordance with Company policies.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC4.1.2	Management performs user access reviews annually to validate user accounts, and their associated privileges remain appropriate. Changes resulting from the review, if any, are documented and implemented.	Inspected evidence of the user access review and noted it was completed on an annual basis and changes resulting from the review were documented and implemented.	No exceptions noted.
CC4.1.3	Production systems and resources are monitored and automated alerts are sent to personnel based on pre-configured rules. Events are triaged to determine if they constitute an incident and escalated per policy if necessary.	Inspected the monitoring logs and noted automated alerts were sent to personnel based on pre-configured rules and are escalated per policy if needed.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC4.2 - COSO Principle 17: The entity evaluates and communicates internal control deficiencies in a timely manner to those parties responsible for taking corrective action, including senior management and the board of directors, as appropriate.			
CC1.2.2	The Company's Board of Directors meets quarterly with Management to review Company performance, strategic objectives, compliance initiatives, and security and privacy risk and mitigation strategies. Meeting minutes, including decisions made and action items, are documented.	Inspected the Board of Directors meeting agendas and minutes and noted that meetings were conducted on a quarterly basis and that the documentation included records of decisions made and associated action items.	No exceptions noted.
CC3.1.1	The Company conducts risks assessments annually. The risk assessment includes consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner is assigned to each risk, and every risk is assigned a risk treatment option. Results of the risk assessment are documented in a risk register.	Inspected the risk assessment and noted it was completed on an annual basis and included consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner was assigned to each risk, and every risk was assigned a risk treatment option. Results of the risk assessment were documented in a risk register.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.1.2	The Company has defined and documented a process for risk assessment and risk management that outlines the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	Inspected the Company's Risk Assessment Policy and noted it had been defined and documented a process for risk assessment and risk management that outlined the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC5.0 - Control Activities			
CC5.1 - COSO Principle 10: The entity selects and develops control activities that contribute to the mitigation of risks to the achievement of objectives to acceptable levels.			
CC3.1.1	The Company conducts risks assessments annually. The risk assessment includes consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner is assigned to each risk, and every risk is assigned a risk treatment option. Results of the risk assessment are documented in a risk register.	Inspected the risk assessment and noted it was completed on an annual basis and included consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner was assigned to each risk, and every risk was assigned a risk treatment option. Results of the risk assessment were documented in a risk register.	No exceptions noted.
CC5.1.1	Access requests to information resources are documented and approved by Management based on least privilege, need to know, and segregation of duties principles.	Inspected the access request documentation for a sample of employees and noted that they were approved by Management based on least privilege, need to know, and segregation of duties principles.	Exception noted. Management was unable to provide supporting documentation for the access request and approval for the samples selected, as the formalized process for documenting and approving access requests was not implemented until December 2025.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC5.1.2	Access to make changes in production environments is restricted to authorized personnel in accordance with segregation of duties principles.	Inspected the user access listing for employees with access to make changes in production environments and noted access was restricted to authorized personnel in accordance with segregation of duties principles.	No exceptions noted.
CC5.2 - COSO Principle 11: The entity also selects and develops general control activities over technology to support the achievement of objectives.			
CC1.4.2	The Company has established training programs to help personnel gain awareness of information security best practices. Personnel (including employees and contractors as applicable) are required to complete the training during onboarding. Periodic refresher training is provided to personnel at least annually and as deemed necessary (e.g., upon changes in security requirements, policies, regulations, etc.).	Inspected the training records for a sample of new hires and noted training was completed during onboarding. Inspected the training records for a sample of employees and noted training was completed at least annually.	No exceptions noted. No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.1.1	The Company conducts risks assessments annually. The risk assessment includes consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner is assigned to each risk, and every risk is assigned a risk treatment option. Results of the risk assessment are documented in a risk register.	Inspected the risk assessment and noted it was completed on an annual basis and included consideration of threats and vulnerabilities and an evaluation of the likelihood and impact for each risk. A risk owner was assigned to each risk, and every risk was assigned a risk treatment option. Results of the risk assessment were documented in a risk register.	No exceptions noted.
CC3.2.1	The Company conducts vulnerability scans of the production environment continuously. Results are reviewed by Company personnel and vulnerabilities are tracked to resolution.	Inspected the vulnerability scan results during the reporting period and noted they were performed continuously and results were reviewed and vulnerabilities were tracked to resolution.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC4.1.1	An external penetration test is performed by an independent third party annually. Results are reviewed by Management and vulnerabilities are tracked to resolution in accordance with Company policies.	Inspected the external penetration test results and noted it was completed on an annual basis by an independent third party and noted results were reviewed and vulnerabilities were tracked to resolution by Management in accordance with Company policies.	No exceptions noted.
CC5.1.1	Access requests to information resources are documented and approved by Management based on least privilege, need to know, and segregation of duties principles.	Inspected the access request documentation for a sample of employees and noted that they were approved by Management based on least privilege, need to know, and segregation of duties principles.	Exception noted. Management was unable to provide supporting documentation for the access request and approval for the samples selected, as the formalized process for documenting and approving access requests was not implemented until December 2025.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC5.3 - COSO Principle 12: The entity deploys control activities through policies that establish what is expected and in procedures that put policies into action.			
CC1.1.2	The Company maintains a documented Code of Conduct. Eligible personnel are required to acknowledge the Company's Code of Conduct during onboarding and annually thereafter.	Inspected the documented Code of Conduct and noted it is maintained by the Company. Inspected the acknowledgment records for a sample of employees and noted compliance with annual acknowledgment requirements.	No exceptions noted. No exceptions noted.
CC2.1.2	The Company has defined and documented an Information Security Policy to support the functioning of internal control.	Inspected the Information Security Policy and noted it is defined and documented to support the functioning of internal control.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC3.1.2	The Company has defined and documented a process for risk assessment and risk management that outlines the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	Inspected the Company's Risk Assessment Policy and noted it had been defined and documented a process for risk assessment and risk management that outlined the Organization's approach for identifying risks and assigning risk owners, the risk acceptance criteria, and the approach for evaluating and treating risks based on the defined criteria.	No exceptions noted.
CC5.3.1	The Company has a documented Acceptable Use Policy that outlines requirements for personnel's usage of Company assets.	Inspected the Company's Acceptable Use Policy and noted it outlined requirements for personnel's usage of Company assets.	No exceptions noted.
CC5.3.2	The Company has a defined policy that establishes requirements for vulnerability management across the Organization, including monitoring, cataloging, and assigning risk ratings to vulnerabilities to prioritize remediation efforts.	Inspected the Company's Vulnerability Management Policy and noted it establishes requirements for vulnerability management across the Organization, including monitoring, cataloging, and assigning risk ratings to vulnerabilities to prioritize remediation efforts.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC5.3.3	The Company has a documented Disaster Recovery Plan that outlines roles, responsibilities and detailed procedures for recovery of systems in the event of a disaster scenario.	Inspected the Company's Disaster Recovery Plan and noted it outlines roles, responsibilities, and detailed procedures for system recovery in the event of a disaster scenario.	No exceptions noted.
CC5.3.4	The Company has a defined Business Continuity Plan that outlines strategies for maintaining operations during a disruption.	Inspected the Company's Business Continuity Plan and noted it outlines strategies for maintaining operations during a disruption.	No exceptions noted.
CC6.0 - Logical and Physical Access Controls			
CC6.1 - The entity implements logical access security software, infrastructure, and architectures over protected information assets to protect them from security events to meet the entity's objectives.			
CC2.1.3	A centralized asset register is maintained for physical, cloud, and other assets that includes descriptive attributes for asset accountability such as owner, description, classification, and/or other information based on the type of asset. Processes are in place to maintain an updated inventory through automated mechanisms.	Inspected the centralized asset register and noted it includes descriptive attributes for asset accountability. Inspected the asset inventory and noted it is updated through manual reviews and automated mechanisms as needed.	No exceptions noted. No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC5.1.1	Access requests to information resources are documented and approved by Management based on least privilege, need to know, and segregation of duties principles.	Inspected the access request documentation for a sample of employees and noted that they were approved by Management based on least privilege, need to know, and segregation of duties principles.	Exception noted. Management was unable to provide supporting documentation for the access request and approval for the samples selected, as the formalized process for documenting and approving access requests was not implemented until December 2025.
CC6.1.1	Root password authentication to production resources is limited to authorized individuals and only allowed under exceptional circumstances for a limited time duration based on documented business justification.	Inspected evidence noting root password authentication to production resources was limited to authorized individuals and only allowed under exceptional circumstances for a limited time duration based on documented business justification.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.1.2	System and physical access is revoked within one business day of effective termination date for terminated users (including employees, third parties and vendors, and other personnel).	Inspected evidence for a sample of terminated users and noted system and physical access was revoked within one business day of effective termination date.	Exception noted. Per inspection, it was noted physical access was revoked within one business day of termination; however, system access was not revoked within one business day of termination. Additionally, supporting documentation for the access removal ticket was unable to be obtained.
CC6.1.3	Authentication to systems requires the use of multi-factor authentication.	Inspected evidence noting authentication to systems required the use of multi-factor authentication.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.1.4	The Company has a documented policy outlining the minimum requirements for passwords used for authentication to organizational systems. Password requirements are enforced for all systems in accordance with Company policy.	Inspected the Company's Password Policy and noted is outlined the minimum requirements for passwords used for authentication to organizational systems. Inspected evidence noting password requirements were enforced for all systems in accordance with Company policy.	No exceptions noted. No exceptions noted.
CC6.1.5	Cloud resources are configured to deny public access.	Inspected evidence noting cloud resources were configured to deny public access.	No exceptions noted.
CC6.1.6	Authentication to systems requires the use of unique identities.	Inspected the user access listings for the systems and confirmed that all users authenticate using unique identifiers.	No exceptions noted.
CC6.1.7	Administrative or privileged access to systems, resources, and functions is restricted to authorized personnel.	Inspected the administrative access listing to systems, resources and functions and noted access was restricted to authorized personnel.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.2 - Prior to issuing system credentials and granting system access, the entity registers and authorizes new internal and external users whose access is administered by the entity. For those users whose access is administered by the entity, user system credentials are removed when user access is no longer authorized.			
CC4.1.2	Management performs user access reviews annually to validate user accounts, and their associated privileges remain appropriate. Changes resulting from the review, if any, are documented and implemented.	Inspected evidence of the user access review and noted it was completed on an annual basis and changes resulting from the review were documented and implemented.	No exceptions noted.
CC5.1.1	Access requests to information resources are documented and approved by Management based on least privilege, need to know, and segregation of duties principles.	Inspected the access request documentation for a sample of employees and noted that they were approved by Management based on least privilege, need to know, and segregation of duties principles.	Exception noted. Management was unable to provide supporting documentation for the access request and approval for the samples selected, as the formalized process for documenting and approving access requests was not implemented until December 2025.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.1.2	System and physical access is revoked within one business day of effective termination date for terminated users (including employees, third parties and vendors, and other personnel).	Inspected the system and physical access control activity and noted that access is revoked within one business day of the effective termination date for terminated users.	Exception noted. Per inspection, it was noted physical access was revoked within one business day of termination; however, system access was not revoked within one business day of termination. Additionally, supporting documentation for the access removal ticket was unable to be obtained.
CC6.3 - The entity authorizes, modifies, or removes access to data, software, functions, and other protected information assets based on roles, responsibilities, or the system design and changes, giving consideration to the concepts of least privilege and segregation of duties, to meet the entity's objectives.			
CC4.1.2	Management performs user access reviews annually to validate user accounts, and their associated privileges remain appropriate. Changes resulting from the review, if any, are documented and implemented.	Inspected evidence of the user access review and noted it was completed on an annual basis and changes resulting from the review were documented and implemented.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC5.1.1	Access requests to information resources are documented and approved by Management based on least privilege, need to know, and segregation of duties principles.	Inspected the access request documentation for a sample of employees and noted that they were approved by Management based on least privilege, need to know, and segregation of duties principles.	Exception noted. Management was unable to provide supporting documentation for the access request and approval for the samples selected, as the formalized process for documenting and approving access requests was not implemented until December 2025.
CC6.1.2	System and physical access is revoked within one business day of effective termination date for terminated users (including employees, third parties and vendors, and other personnel).	Inspected the system and physical access control activity and noted that access is revoked within one business day of the effective termination date for terminated users.	Exception noted. Per inspection, it was noted physical access was revoked within one business day of termination; however, system access was not revoked within one business day of termination. Additionally, supporting documentation for the access removal ticket was unable to be obtained.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.1.7	Administrative or privileged access to systems, resources, and functions is restricted to authorized personnel.	Inspected the administrative access listing to systems, resources and functions and noted access was restricted to authorized personnel.	No exceptions noted.
CC6.4 - The entity restricts physical access to facilities and protected information assets (for example, data center facilities, backup media storage, and other sensitive locations) to authorized personnel to meet the entity's objectives.			
CC4.1.2	Management performs user access reviews annually to validate user accounts, and their associated privileges remain appropriate. Changes resulting from the review, if any, are documented and implemented.	Inspected evidence of the user access review and noted it was completed on an annual basis and changes resulting from the review were documented and implemented.	No exceptions noted.
CC6.5 - The entity discontinues logical and physical protections over physical assets only after the ability to read or recover data and software from those assets has been diminished and is no longer required to meet the entity's objectives.			
CC6.5.1	The Company has documented policies and procedures for erasure or destruction of information that has been identified for disposal.	Inspected the Company's Data Protection and Data Retention Policies and noted they included documentation for erasure or destruction of information that has been identified for disposal.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.6 - The entity implements logical access security measures to protect against threats from sources outside its system boundaries.			
CC6.1.8	Authentication to systems requires the use of multi-factor authentication.	Inspected evidence noting authentication to systems required the use of multi-factor authentication.	No exceptions noted.
CC6.1.5	Cloud resources are configured to deny public access.	Inspected evidence noting cloud resources were configured to deny public access.	No exceptions noted.
CC6.6.1	A threat detection system is in place to monitor web traffic and suspicious activity. When anomalous traffic activity is identified, alerts are automatically sent to personnel, investigated, and escalated through the incident management process, if necessary.	Inspected the threat detection system and noted it monitors web traffic and suspicious activity and inspected the alerts and noted they were automatically sent to personnel for investigation and escalation through the incident management process, if necessary.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.6.2	An Intrusion Detection System (IDS)/Intrusion Prevention System (IPS) is in place to detect real-time suspicious or anomalous network traffic that may be indicative of threat actor activity and is configured to alert personnel when a potential intrusion is detected.	Inspected the IDS/IPS system and noted it is set to alert personnel for potential intrusions and inspected the continuous monitoring logs and noted real-time detection of suspicious network traffic.	No exceptions noted.
CC6.6.3	A web application firewall is in place to protect public-facing web applications from outside threats.	Inspected the web application firewall and noted it is in place to protect public-facing web applications from outside threats.	No exceptions noted.
CC6.7 - The entity restricts the transmission, movement, and removal of information to authorized internal and external users and processes, and protects it during transmission, movement, or removal to meet the entity's objectives.			
CC6.7.1	Automated operating system (OS) updates are enabled on Company-managed devices and containers to install security patches.	Inspected evidence of the OS updates and noted they are enabled on Company-managed devices and containers to install security patches.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.8 - The entity implements controls to prevent or detect and act upon the introduction of unauthorized or malicious software to meet the entity's objectives.			
CC6.6.1	A threat detection system is in place to monitor web traffic and suspicious activity. When anomalous traffic activity is identified, alerts are automatically sent to personnel, investigated, and escalated through the incident management process, if necessary.	Inspected the threat detection system and noted it monitors web traffic and suspicious activity and inspected the alerts and noted they were automatically sent to personnel for investigation and escalation through the incident management process, if necessary.	No exceptions noted.
CC6.8.1	Anti-malware software is installed on all Company-managed devices.	Inspected evidence noting anti-malware software was installed on all Company-managed devices.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC7.0 - System Operations			
CC7.1 - To meet its objectives, the entity uses detection and monitoring procedures to identify (1) changes to configurations that result in the introduction of new vulnerabilities, and (2) susceptibilities to newly discovered vulnerabilities.			
CC3.2.1	The Company conducts vulnerability scans of the production environment continuously. Results are reviewed by Company personnel and vulnerabilities are tracked to resolution.	Inspected the vulnerability scan results during the reporting period and noted they were performed continuously and results were reviewed and vulnerabilities were tracked to resolution.	No exceptions noted.
CC4.1.1	An external penetration test is performed by an independent third party annually. Results are reviewed by Management and vulnerabilities are tracked to resolution in accordance with Company policies.	Inspected the external penetration test results and noted it was completed on an annual basis by an independent third party and noted results were reviewed and vulnerabilities were tracked to resolution by Management in accordance with Company policies.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC4.1.3	Production systems and resources are monitored and automated alerts are sent to personnel based on pre-configured rules. Events are triaged to determine if they constitute an incident and escalated per policy if necessary.	Inspected the monitoring logs and noted automated alerts were sent to personnel based on pre-configured rules and are escalated per policy if needed.	No exceptions noted.
CC5.3.2	The Company has a defined policy that establishes requirements for vulnerability management across the Organization, including monitoring, cataloging, and assigning risk ratings to vulnerabilities to prioritize remediation efforts.	Inspected the Company's Vulnerability Management Policy and noted it establishes requirements for vulnerability management across the Organization, including monitoring, cataloging, and assigning risk ratings to vulnerabilities to prioritize remediation efforts.	No exceptions noted.
CC6.6.1	A threat detection system is in place to monitor web traffic and suspicious activity. When anomalous traffic activity is identified, alerts are automatically sent to personnel, investigated, and escalated through the incident management process, if necessary.	Inspected the threat detection system and noted it monitors web traffic and suspicious activity and inspected the alerts and noted they were automatically sent to personnel for investigation and escalation through the incident management process, if necessary.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.6.2	An Intrusion Detection System (IDS)/Intrusion Prevention System (IPS) is in place to detect real-time suspicious or anomalous network traffic that may be indicative of threat actor activity and is configured to alert personnel when a potential intrusion is detected.	Inspected the IDS/IPS system and noted it is set to alert personnel for potential intrusions and inspected the continuous monitoring logs and noted real-time detection of suspicious network traffic.	No exceptions noted.
CC6.7.1	Automated operating system (OS) updates are enabled on Company-managed devices and containers to install security patches.	Inspected evidence of the OS updates and noted they are enabled on Company-managed devices and containers to install security patches.	No exceptions noted.
CC6.8.1	Anti-malware software is installed on all Company-managed devices.	Inspected evidence noting anti-malware software was installed on all Company-managed devices.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC7.2 - The entity monitors system components and the operation of those components for anomalies that are indicative of malicious acts, natural disasters, and errors affecting the entity's ability to meet its objectives; anomalies are analyzed to determine whether they represent security events.			
CC4.1.3	Production systems and resources are monitored and automated alerts are sent to personnel based on pre-configured rules. Events are triaged to determine if they constitute an incident and escalated per policy if necessary.	Inspected the monitoring logs and noted automated alerts were sent to personnel based on pre-configured rules and are escalated per policy if needed.	No exceptions noted.
CC6.6.1	A threat detection system is in place to monitor web traffic and suspicious activity. When anomalous traffic activity is identified, alerts are automatically sent to personnel, investigated, and escalated through the incident management process, if necessary.	Inspected the threat detection system and noted it monitors web traffic and suspicious activity and inspected the alerts and noted they were automatically sent to personnel for investigation and escalation through the incident management process, if necessary.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC6.6.2	An Intrusion Detection System (IDS)/Intrusion Prevention System (IPS) is in place to detect real-time suspicious or anomalous network traffic that may be indicative of threat actor activity and is configured to alert personnel when a potential intrusion is detected.	Inspected the IDS/IPS system and noted it is set to alert personnel for potential intrusions and inspected the continuous monitoring logs and noted real-time detection of suspicious network traffic.	No exceptions noted.
CC6.6.3	A web application firewall is in place to protect public-facing web applications from outside threats.	Inspected the web application firewall and noted it is in place to protect public-facing web applications from outside threats.	No exceptions noted.
CC7.3 - The entity evaluates security events to determine whether they could or have resulted in a failure of the entity to meet its objectives (security incidents) and, if so, takes actions to prevent or address such failures.			
CC7.3.1	The Company performs a test of all components of the Incident Response Plan and procedures at least annually. The documented plan and procedures are updated if necessary, based on the results of the test.	Inspected the Incident Response Plan test and noted it was completed on an annual basis and the Plan was updated based on results of the test.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC7.3.2	The Company has a documented Incident Response Plan that outlines roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents. The Incident Response Plan is reviewed periodically and updated as needed according to lessons learned from previous incidents and industry developments.	Inspected the Incident Response Plan and noted it outlined roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents and was reviewed on an annual basis.	No exceptions noted.
CC7.4 - The entity responds to identified security incidents by executing a defined incident-response program to understand, contain, remediate, and communicate security incidents, as appropriate.			
CC7.3.1	The Company performs a test of all components of the Incident Response Plan and procedures at least annually. The documented plan and procedures are updated if necessary, based on the results of the test.	Inspected the Incident Response Plan test and noted it was completed on an annual basis and the Plan was updated based on results of the test.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC7.3.2	The Company has a documented Incident Response Plan that outlines roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents. The Incident Response Plan is reviewed periodically and updated as needed according to lessons learned from previous incidents and industry developments.	Inspected the Incident Response Plan and noted it outlined roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents and was reviewed on an annual basis.	No exceptions noted.
CC7.5 - The entity identifies, develops, and implements activities to recover from identified security incidents.			
CC7.3.1	The Company performs a test of all components of the Incident Response Plan and procedures at least annually. The documented plan and procedures are updated if necessary, based on the results of the test.	Inspected the Incident Response Plan test and noted it was completed on an annual basis and the Plan was updated based on results of the test.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC7.3.2	The Company has a documented Incident Response Plan that outlines roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents. The Incident Response Plan is reviewed periodically and updated as needed according to lessons learned from previous incidents and industry developments.	Inspected the Incident Response Plan and noted it outlined roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents and was reviewed on an annual basis.	No exceptions noted.
CC8.0 - Change Management			
CC8.1 - The entity authorizes, designs, develops or acquires, configures, documents, tests, approves, and implements changes to infrastructure, data, software, and procedures to meet its objectives.			
CC5.1.2	Access to make changes in production environments is restricted to authorized personnel in accordance with segregation of duties principles.	Inspected the user access listing for employees with access to make changes in production environments and noted access was restricted to authorized personnel in accordance with segregation of duties principles.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC8.1.1	The Company uses a version control system to manage source code, change documentation and tracking, release labeling, and other change management tasks. Access to the version control system is restricted to authorized personnel.	Inspected the version control system and noted that access is restricted to authorized personnel.	No exceptions noted.
CC8.1.2	Changes are peer-reviewed and approved prior to deployment by an individual different from the developer to maintain segregation of duties.	Inspected evidence for a sample of changes and noted they were peer-reviewed and approved prior to deployment by an individual different from the develop to maintain segregation of duties.	No exceptions noted.
CC8.1.3	Pre-production environments (e.g., development, testing, etc.) are separated from production environments and the separation is enforced with access controls.	Inspected evidence noting that pre-production environments were separated from production environments and the separation is enforced with access controls.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC8.1.4	Changes are tested in an environment separate from production prior to deployment in accordance with the nature of the change. Documented evidence of testing criteria and testing results is retained.	Inspected evidence for a sample of changes and noted they were tested in an environment separate from production prior to deployment in accordance with the nature of the change and documented evidence of testing criteria and testing results were retained.	No exceptions noted.
CC8.1.5	Change releases are approved by authorized personnel prior to deployment to production.	Inspected evidence for a sample of change releases and noted they were approved by authorized personnel prior to deployment to production.	No exceptions noted.
CC8.1.6	The Company has documented policies that describes the requirements for managing changes across the Organization, including changes to infrastructure, systems, and applications.	Inspected the Company's Change Management Policy and Software Development Life Cycle Policy and noted it described the requirements for managing changes across the Organization, including changes to infrastructure, systems, and applications.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC9.0 - Risk Mitigation			
CC9.1 - The entity identifies, selects, and develops risk mitigation activities for risks arising from potential business disruptions.			
CC5.3.3	The Company has a documented Disaster Recovery Plan that outlines roles, responsibilities and detailed procedures for recovery of systems in the event of a disaster scenario.	Inspected the Company's Disaster Recovery Plan and noted it outlines roles, responsibilities, and detailed procedures for system recovery in the event of a disaster scenario.	No exceptions noted.
CC5.3.4	The Company has a defined Business Continuity Plan that outlines strategies for maintaining operations during a disruption.	Inspected the Company's Business Continuity Plan and noted it outlines strategies for maintaining operations during a disruption.	No exceptions noted.
CC7.3.2	The Company has a documented Incident Response Plan that outlines roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents. The Incident Response Plan is reviewed periodically and updated as needed according to lessons learned from previous incidents and industry developments.	Inspected the Incident Response Plan and noted it outlined roles, responsibilities, and procedures to document, analyze, categorize, and respond to incidents and was reviewed on an annual basis.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC9.1.1	The Company maintains cybersecurity insurance to mitigate the financial impact of security incidents and business disruptions.	Inspected the Company's cybersecurity insurance policy and noted it is maintained to mitigate the financial impact of security incidents and business disruptions.	No exceptions noted.
CC9.2 - The entity assesses and manages risks associated with vendors and business partners.			
CC3.2.2	The Company obtains and reviews compliance reports or other evidence for critical vendors and service providers at least annually to monitor the third parties' compliance with industry frameworks, regulations, and standards. Results of the review and action items, if any, are documented.	Inspected the compliance reports for a sample of critical vendors and service providers and noted Management reviewed the results on an annual basis.	No exceptions noted.
CC3.2.3	The Company performs due diligence activities prior to engaging with a new service provider or vendor. Results of the due diligence activities including action items are documented.	Inspected the due diligence performed for a sample of new service providers and noted results of the due diligence activities including action items were documented.	No exceptions noted.

REF	CONTROL SPECIFIED BY IPM	TESTING PERFORMED BY RICHEY MAY	RESULTS OF TESTING
CC9.2.1	The Company has a documented policy that outlines requirements for managing vendor and third-party relationships through their entire life cycle.	Inspected the Company's Vendor Management Policy and noted it outlined the requirements for managing vendor and third-party relationships through their entire life cycle.	No exceptions noted.

Section V – Other Information Provided by the Service Organization

The information included below is presented by IPM to provide additional information to their user entities and is not part of IPM's description of iAltA's Verivend system. The information presented below has not been subjected to Richey May's examination procedures and, accordingly, Richey May expressed no opinion on it.

A. Management's Response to Identified Testing Exceptions

REF	CONTROL SPECIFIED BY IPM	OBSERVATION	MANAGEMENT RESPONSE
CC5.1.1	Access requests to information resources are documented and approved by Management based on least privilege, need to know, and segregation of duties principles.	Management was unable to provide supporting documentation for the access request and approval for the samples selected, as the formalized process for documenting and approving access requests was not implemented until December 2025.	An updated process and tooling was put in place to track requests, and employees were trained on proper protocols.
CC6.1.2	System and physical access is revoked within one business day of effective termination date for terminated users (including employees, third parties and vendors, and other personnel).	Per inspection, it was noted physical access was revoked within one business day of termination; however, system access was not revoked within one business day of termination. Additionally, supporting documentation for the access removal ticket was unable to be obtained.	An updated process and tooling was put in place to track terminations, and people managers were trained on proper protocols.
